

Rubber or plastics covered rollers — Enquiries and orders — Recommendations for technical information to be supplied by purchaser

In 1979 Technical Committee ISO/TC 45, *Rubber and rubber products*, agreed to progress a request by Yugoslavia to issue a document listing the essential information required by the roller covering manufacturer. This was to ensure the purchaser was supplied with a product as suitable as possible for the intended application. A draft was then prepared taking account of the technical terms used in a number of countries. The draft was discussed by Working group 11, *Miscellaneous rubber products*, of TC 45 in 1980 and the recommendation made that it should be published as an ISO Technical Report type 3. The draft was subsequently balloted within TC 45 as a draft proposal for a Technical Report. After amendment, as a result of the comments received, TC 45 approved the issue of the document as a type 3 Technical Report.
